SUBJECT: WELLS MFG. VR730 VOLTAGE REGULATOR

TO: ALL CESSNA ZONES, DISTRIBUTORS AND DEALERS

Investigation of an electrical system incident found that an automotive voltage regulator (VR730) manufactured by Wells Mfg. Co., Fond du Lac, Wisconsin, had been field installed on a Cessna aircraft.

Since the Wells (VR730) voltage regulator, as well as all other automotive voltage regulators, are not compatible with the Cessna electrical configuration and are not certified for use on aircraft-- they must never be used.

Any Wells (VR730) or other automotive voltage regulator found installed on any Cessna aircraft must be removed immediately.
